DNA Genotype Test Application

Lately, DNA genotype testing has come to the forefront. This test would replace testing we require to verify the lineage of a horse, and which was required for each stallion. The blood type testing, for various reasons, will no longer be available, or offered by the laboratory. We, therefore, had to move toward DNA genotype testing and formulate these new procedures. During the year 2001 and all subsequent years, a DNA genotype certificate must be obtained for all sires. This certificate must be forwarded to Canadian Livestock Records Corporation (CLRC) before any breedings take place. No registration certificate, **as of January 2002**, will be issued without remittance to CLRC of the DNA genotype certificate for the sire, the dam and the foal. **The foal's DNA genotype certificate must confirm parentage.** There is an exclusion for gelding until 2004.

Members who so wish, can now use the following procedure to register or confirm the sire status of their stallion :

Make a request for each horse to the Canadian Livestock Records Corporation (CLRC) for the necessary kit using the form at the bottom of this page. A payment of \$60.00 per horse must accompany the form.

***DO NOT MAIL HAIR SAMPLES TO
CANADIAN LIVESTOCK RECORDS CORPORATION.***

Request for DNA genotype testing

Name or horse to be tested : _____

Registration number: _____

Sire : _____

Dam : _____

Owner : _____ CHBA ID # : _____

Address : _____

_____ Telephone : _____

***Send this form to CLRC 2417 Holly Lane, Ottawa (Ontario) K1V 0M7
accompanied by a cheque for \$60.00.***
